Sankhya™ Technologies Wins Lockheed Martin India Innovation Award - 2008

Chennai, Tamil Nadu, India - May 07, 2008 - Sankhya Technologies today announced that, in the Lockheed Martin India Innovation Growth Program 2008, Sankhya was selected as a finalist for development of Teraptor™ technology. Teraptor Technology consists of a framework of languages, tools and libraries that can help embedded system developers in designing new devices.

Teraptor technology is especially useful for consumer products and automotive electronics companies where reduced time-to-market and lower cost of production are key success factors.

Teraptor brings architectural specification and modeling to computer (embedded) system designers. Teraptor includes languages for modeling processors and systems as well as several tools to automate the various activities that are required to create an embedded system such as tool chain development, processor verification and virtual prototype development.

“Our research and development efforts are driven by a clear vision and road map; awards and recognitions help validate the direction and ensure we remain focused” said Gopi Kumar Bulusu, CEO and Chief Architect, Sankhya Technologies Private Limited.

About Sankhya Technologies: Sankhya Technologies is a software research and development company based in India. Consumer solutions powered by embedded systems are time consuming and costly to design. Consumer needs vary greatly across geographic regions, demographics and time! Sankhya is using innovation to create embedded system design methodologies and tools that reduce design cost, increase design reuse and cut time-to-market for embedded system designers.

Founded in 1996, Sankhya Technologies is a privately held firm with development centers in Chennai and Visakhapatnam, India.
