

### Manufacturing Edition

You have promising market traction and solid physical infrastructure in place. Now you're ready to ramp up your growth. You need a trusted software solution that suits your industry requirements, your business model and the challenges you face – and more importantly, that can scale up to your growing needs.

V-One is a Web application suite consisting of growing set of useful business management applications. Order Management Solution is one such application helpful in automating the entire set of activities involved from the point a sales order is received through the production process until the shipment stage including generating the documentation required at the time of shipment.

#### Key features

**MIS Reports:** Members of the management can generate, view and print standard as well as custom reports. The ability to access this information even from a mobile phone makes it lot more convenient!

**Commercial & Accounting** Maintain a Product catalogue including part numbers, description, pricing information and applicable tax rates

- Maintain Customer data
- Enter, update, Amend and list sales orders
- Add and match receipts to invoices.

**Inventory** Maintain and track stock of raw material, finished goods

- Maintain Supplier data.
- Generate reports like list stock available, stock issued, production issue etc.

**Production** Maintain and track daily product wise production information

- Authorize inspection for quality
- Schedule the production for shipment.
- Generate useful reports like listing daily product wise production details etc.

**Shipment & Logistics** Generate documentation at the time of shipment just in a matter of few seconds - standard documents that can automatically be generated include

- Tax invoice
- Cash invoice
- Delivery Challan
- Generate reports like list deliverables pending by PO, period etc.

#### Key Advantages

1. **Process driven solution** - allows users across all departments to track, update and commit changes ensuring information is captured at the instance
2. **Web based solution** - no need to install the software in any of the client systems
3. **Reports** - Allows management to generate variety of reports including for example daily production product wise, shipment and inventory levels.
4. **Scalable & Secure**- Robust platform that allows implementation and integration of other applications. Standards conforming Security
5. **Lead Time** - The application can be installed, implemented in less than a week!
6. **Usability** - Users with basic academic qualifications can start using the application within a few hours
